PRABIN RAG TK

Software Engineer | Backend (.NET / Node.js) | DevOps & CI/CD | Cross-Platform Mobile

Dubai, United Arab Emirates | +971 56 660 8834 | prabinrag2340@gmail.com

GitHub: github.com/prabinrag234 | Projects: github.com/classmate-projects | Portfolio: prabin2340.vercel.app

PROFESSIONAL SUMMARY

Software Engineer with **4+ years of experience** in backend services, CI/CD automation, production deployment and cross-platform mobile apps. Most recently at **Tanjer Infosystems LLC** (to Oct 2026), deploying and supporting the **Heartbeat** hospital management system on **Apache Tomcat** and **MySQL Server** for client hospitals in the UAE. Backend and DevOps lead on a portfolio of six collaborative products, including **Yoton**, a live multi-country hospital management system and EMR whose **ASP.NET Core (.NET 10) API exposes ~500 REST endpoints across 47 controllers**. Experienced in **C# / .NET, Node.js, PostgreSQL, SignalR, Docker and GitHub Actions**, with a focus on security and healthcare compliance. **Available for immediate joining; open to relocation worldwide.**

TECHNICAL SKILLS

Programming: C#, JavaScript, TypeScript, Python, Dart, Java, SQL, HTML5, CSS3

Backend: ASP.NET Core Web API (.NET 9/10), Entity Framework Core, SignalR, Node.js, Express.js, FastAPI, REST API design, OpenAPI/Swagger, background services

Mobile: React Native (Expo), .NET MAUI, Xamarin.Forms, Flutter, Android (Kotlin), iOS (Swift)

Databases: PostgreSQL, MySQL Server, MSSQL, MongoDB, Supabase (Postgres, Auth, Storage, Realtime), SQLite

DevOps & Cloud: GitHub Actions, Azure DevOps, Docker, Render, Vercel, Netlify (serverless), Railway, Apache Tomcat, CI/CD pipelines, Git

Security: JWT with rotating refresh tokens, cookie/session auth, RBAC, AES field-level encryption, bcrypt, rate limiting, audit logging

Integrations & AI: Stripe (Checkout, webhooks), Google Gemini, Hugging Face Transformers, WebRTC, IMAP, Brevo email

Testing & Reporting: xUnit integration testing, Jest, BIRT reporting, ClosedXML (Excel reports)

PROFESSIONAL EXPERIENCE

Software Implementation Executive — Aug 2024 – Oct 2026

Tanjer Infosystems LLC, Dubai, UAE | Product: Heartbeat Hospital Management Software (Apache Tomcat, MySQL Server, BIRT)

- Deployed and configured the **Heartbeat hospital management system** for client hospitals end to end, from server provisioning through go-live.
- Installed and secured **Apache Tomcat** application servers and administered the **MySQL Server** databases behind Heartbeat in production.
- Diagnosed and resolved **client–server communication issues** across end-user machines, Tomcat and MySQL, keeping production systems stable and performant.
- Designed and customised **BIRT reports** that turn hospital operational data into actionable management insights.
- Delivered **technical demonstrations, end-user training** and **onsite support**, including integration of signature pads, printers and tablets.

Software Engineer L4 — Mar 2022 – Jul 2024

Claysys Technologies (P) Ltd, Kerala, India

- Engineered **cross-platform mobile applications** for Android and iOS using **Xamarin.Forms, .NET MAUI and Flutter**.
- Integrated **third-party APIs and SDKs** to extend application functionality and deliver new client-facing features.
- Optimised native **Android (Kotlin)** and **iOS (Swift)** components and resolved complex **multi-platform issues**, improving performance and stability.
- Implemented **CI/CD workflows** that streamlined and standardised the build and deployment process.

PROJECT EXPERIENCE

ClassMates – Collaborative Product Portfolio (github.com/classmate-projects). Role: **Backend, DevOps & Mobile Engineer**; responsible for APIs, databases, CI/CD, deployment and cross-platform apps, working with a frontend developer who owned the web user interfaces.

Yoton – Hospital & Clinic Management System with EMR — Live, v2.7.83

Technologies: .NET 10, ASP.NET Core, EF Core 10, PostgreSQL, SignalR, React Native (Expo), Docker, Render, GitHub Actions

- Architected the **Yoton API**, the system of record for the staff portal and patient app: **~500 REST endpoints across 47 controllers** covering EMR, nursing, lab, radiology, pharmacy, inventory, billing and compliance.
- Implemented **multi-tenant data isolation** with EF Core global query filters and soft-delete, plus **two-layer access control** (ASP.NET roles and per-module grants) that syncs to clients in real time.

- Designed a **country-aware region engine** for **Qatar, UAE and India** (currency, national ID formats, VAT/GST with CGST/SGST split, vaccine schedules), including **17 regulator KPI reports** exported to Excel for Qatar MoPH, with no country-specific logic hardcoded.
- Secured patient data with **field-level AES encryption of PII**, rotating hashed refresh tokens with reuse detection, per-platform **rate limiting** and a **redacted audit log** with record history.
- Built real-time features on **SignalR** (~160 broadcast events, staff–patient chat), background services for attendance and immunisation reminders, and a **FEFO lot-based inventory ledger**.
- Containerised the API with **Docker** and deployed it to **Render** via render.yaml; added a **GitHub Actions** keep-alive workflow to prevent cold-start timeouts, plus self-migrating, self-seeding startup for on-premises installs.
- Rewrote the patient app from **.NET MAUI to React Native (Expo, TypeScript)** with feature parity, biometric lock, screenshot blocking and secure token storage; built a **GitHub Actions pipeline** running typecheck, lint and Jest on every push and producing **signed Android AAB/APK** releases on version tags.

Voyago – Smart Travel Platform with AI Image Moderation **Live**

Technologies: ASP.NET Core 9, EF Core, PostgreSQL, FastAPI, Hugging Face Transformers, React Native (Expo), Docker, Render

- Built the **ASP.NET Core API** at the centre of four repositories (mobile, admin, API, AI): JWT authentication with **single-use rotating refresh tokens** and instant revocation, Haversine-based nearby search, trips, tours, bookings and an admin review workflow.
- Developed a self-hosted **AI moderation microservice** (FastAPI with a Hugging Face Vision Transformer) that screens every uploaded photo before storage, with **zero per-image third-party cost** and fail-closed behaviour if the model is unavailable.
- Built the **Expo/React Native** traveller app (native maps, geotagged uploads, trip tracking); containerised the API and deployed it to Render.

CViN – AI-Powered Resume Intake & Talent Pool **Live**

Technologies: Next.js Route Handlers, Supabase, Google Gemini, IMAP, ASP.NET Core 10, EF Core

- Built the backend intake pipeline: **Google Gemini** extracts 10 structured fields from PDF/DOCX resumes through a **5-model fallback chain**, falling back to manual entry so intake never stops; IMAP mailbox sync with a capped review queue and duplicate prevention.
- Implemented role-based access (Admin, Recruiter, Viewer) and search/ranking APIs; built an **ASP.NET Core 10 development twin** mirroring every production route.

Ztution – Virtual Classroom Platform **Live**

Technologies: Supabase (Postgres, Auth, Storage, Realtime), WebRTC, Stripe, ASP.NET Core 10

- Built **47 backend handlers across 30 route files** for classes, live sessions, chat, materials, assignments and attendance, with an application-level role permission matrix and private storage served via signed URLs.
- Implemented **WebRTC signalling over Supabase Realtime** and **Stripe** subscriptions (Checkout, Customer Portal, signed webhooks).

YourQ – Token Queue Management System **Live**

Technologies: Node.js, Express, Supabase, PostgreSQL, Netlify Functions, Render, ASP.NET Core 10

- Built the queue backend: per-service FIFO queues shared by up to 20 desks, daily numbering reset at local midnight without a scheduler, Free/Pro plans with automatic downgrade on expiry, and daily CSV reports.
- Designed **portable storage** (Supabase, local PostgreSQL or JSON file, switched by environment variable) and deployed the app both **serverless on Netlify Functions** and as a long-lived service via a **Render Blueprint**.

ClassMates Showcase API & AcadExa School Management **In development**

Technologies: .NET 10, ASP.NET Core, EF Core 10, PostgreSQL, xUnit, GitHub Actions, React Native (Expo)

- Re-implemented the product showcase API on ASP.NET Core with identical contracts (cookie auth, bcrypt, admin/member roles), covered by **49 xUnit integration tests** on in-memory SQLite and run by **GitHub Actions CI** on every push and pull request.
- Built the **AcadExa** school management API (students, teachers, classes, attendance, fees) with code-first EF Core migrations, and its Expo mobile app replacing an earlier .NET MAUI prototype.

EDUCATION

Master of Computer Applications (MCA), University of Calicut, Kerala, India **2020 – 2022**

Bachelor of Computer Applications (BCA), University of Calicut, Kerala, India **2017 – 2020**

Languages: English: Fluent | **Malayalam:** Fluent | **Hindi:** Working knowledge
